VdS CEA Guidelines for Sprinkler Systems

Planning and Installation

The present document shall only have a binding character if its use has been agreed upon on a case-by-case basis; otherwise, taking this document into consideration shall be without obligation. The agreement on the use of this document is purely optional. In particular cases, third parties may also accept other requirements at their discretion which do not correspond to this document.

To avoid any distraction from the understanding of the text, VdS Schadenverhütung uses the generic masculine throughout. There is expressly no preference or other valuation implied of the male, female or other genders.

CONTENTS

0 Foreword ... 8
0.1 Application of the VdS CEA Guidelines ... 8
0.2 Classification system for sprinkler systems ... 9
1 General ... 9
1.1 Scope ... 9
1.2 Aims ... 10
1.3 Description ... 11
1.4 Approvals ... 11
1.5 Normative references ... 12
2 Definitions ... 15
3 Contract planning and documentation ... 22
3.1 General ... 22
3.2 Initial considerations ... 22
3.3 Preparation stage ... 23
3.4 Design stage ... 24
3.5 Commencement of installation works ... 28
4 Scope of sprinkler protection ... 28
4.1 Scope of protection and exceptions ... 28
5 Classification of fire hazards ... 30
5.1 General ... 30
5.2 Fire hazard classes ... 30
5.3 Storage ... 31
5.4 Protection of false ceiling and false floor spaces ... 33
6 Hydraulic design ... 34
6.1 General ... 34
6.2 High Hazard Storage (HHS) ... 35
6.3 Pressure and flow requirements for pre-calculated systems ... 38
6.4 Pipe sizing and layout ... 38

7 Water supply - General 39
7.1 Suitability 39
7.2 Connection of other consumers to the water supply 40
7.3 Housing of equipment for the water supply 42
7.4 Test facility devices and measuring equipment 42
8 Choice of water supply 43
8.1 General 43
8.2 Public water mains 43
8.3 Water storage tanks 44
8.4 Natural and artificial sources 52
8.5 Pressure tanks 56
8.6 Type of water supply 58
8.7 Isolation of water sources 59
8.8 Choice of water supply 60
9 Pumps 63
9.1 General 63
9.2 Multiple pump arrangements 63
9.3 Compartments for pump systems 63
9.4 Maximum temperature of water supply 64
9.5 Valves and accessories 64
9.6 Suction conditions 65
9.7 Performance characteristics 67
9.8 Electrically driven pump sets 69
9.9 Diesel engine driven pumps 76
10 Type and size of sprinkler systems 81
10.1 Wet pipe systems 81
10.2 Dry pipe systems 82
10.3 Alternate systems 83
10.4 Pre-action systems 84
10.5 Subsidiary pipe systems 85
10.6 Subsidiary extension of sprinkler system with one control valve 85
10.7 Frost protection 86
11 Spacing and location of sprinklers 89
11.1 General 89
11.2 Maximum area per sprinkler 90
11.3 Minimum distance between sprinklers 91
11.4 Location of sprinklers in relation to building, facilities, and equipment 91
11.5 Intermediate sprinklers in HH occupancies 100
11.6 Alternative protection concept for rack storage 113
12 Sprinkler design characteristics and uses 123
12.1 General 123
12.2 Sprinkler types and applications 124
12.3 Design discharge from sprinklers 126
12.4 Nominal opening temperatures 126
12.5 Sprinkler response sensitivity 127
12.6 Sprinkler guards 128
12.7 Sprinkler water shields 128
12.8 Sprinkler escutcheon plates 129
12.9 Corrosion protection of sprinklers 129

13 Valves 129
13.1 Alarm valve stations 129
13.2 Stop valves 129
13.3 Ring main valves 130
13.4 Drain valves 130
13.5 Test facilities 131
13.6 Flushing connections 131
13.7 Pressure gauge 132
13.8 Relief valves 132
14 Alarms and alarm devices 132
14.1 Water motor alarms or internal electrical alarm 132
14.2 Electrical water flow and water and air pressure switches 136
14.3 Alarm transmission equipment to permanently manned locations 137
15 Pipes 138
15.1 General 138
15.2 Pipe hangers 143
16 Signs, notices, and information 149
16.1 Layout plan 149
16.2 Signs and notices 149
17 Commissioning inspections and documentation 151
17.1 Commissioning tests 151
17.2 Installation certificate and documents 152
18 Maintenance of operational readiness 153
18.1 General 153
18.2 Action following release of a system 156
18.3 Operator’s control programme 156
18.4 Servicing programme by VdS-approved installer 160
19 Monitoring of sprinkler systems 166
19.1 General 166
19.2 Requirements for components of monitoring systems 166
19.3 Monitoring functions 167
19.4 Transmission paths for control commands 168
19.5 Detector lines 168
19.6 Fault warning 169
19.7 Power supply of monitoring system 169
19.8 Power supply from the electric network 169
19.9 Power supply from accumulators 169
19.10 Degree of protection of components 169
Annex A Classification of hazards 170
Annex B Procedure for categorising stored materials 173
B.1 General 173
B.2 Material factor 173
B.3 Effects of storage configuration 175
B.4 Additional categorising method for polypropylene, polyethylene, polystyrene, and plastics with similar fire behaviour 177
Annex C Alphabetic listing of stored products and categories 180

Annex D Requirements for zoned multi-storey buildings 184
D.1 Scope 184
D.2 Subdivision of installations into zones 184
D.3 Requirements for zoned sprinkler installations 184
D.4 Layout plan 185
Annex E Special requirements for high rise systems 186
E.1 Scope 186
E.2 Design criteria 186
E.3 Water supply 187
Annex F Additional requirements increasing the reliability and availability of sprinkler systems 189
F.1 Subdivision into zones 189
F.2 Wet pipe systems 189
F.3 Type and response sensitivity of sprinklers 189
F.4 Alarm valve station 189
F.5 Water supply 189
F.6 Theatres 189
F.7 Additional precautions for maintenance 190
Annex G Methods for hydraulic calculation of pipework 191
G.1 Calculation of pressure losses in pipework 191
G.2 Pre-calculated systems 194
G.3 Fully calculated systems 194
Annex H Figures with examples (informative) 198
Annex I Approved components 201
Annex J New technologies (informative) 203
Annex K Protection of special hazards 204
K.1 Aerosols 204
K.2 Clothes in multiple garment hanging storage 204
K.3 Flammable liquids 206
K.4 Empty pallets 210
K.5 Spirituous liquors in wooden barrels 211
K.6 Non-woven synthetic fabric 211
K.7 Storage of plastics 212
K.8 Local application protection for the production of particle boards 216
K.9 Special protection concept for racks with solid shelves and gangways 217
K.10 Cable ducts, vertical cable ducts, and cable floors 219
K.11 Recycling plants for plastic packaging material 221
K.12 Local application for paper machines 224
K.13 Special requirements for the protection of mobile shelving with ceiling sprinklers only 224
K.14 – deleted - 225

Annex L ESFR sprinkler protection (normative) ... 226
L.1 Introduction ... 226
L.2 Scope ... 226
L.3 Specific definitions ... 226
L.4 Classification of stored goods ... 227
L.5 General ... 229
L.6 Occupancies and fire hazards ... 229
L.7 ST4 (pallet rack storage), ST5 (solid or slatted shelves), ST2 and ST3 (one-row or multiple-row post pallet storage or mesh box pallets) ... 230
L.8 Design criteria ... 231
L.9 Building requirements ... 242
L.10 Layout of ESFR sprinklers ... 243
L.11 Pipe dimensioning ... 249
L.12 Water supply ... 250
Annex M Sprinkler systems with foam proportioning ... 251
M.1 Choice and type of sprinkler system ... 251
M.2 Foam proportioning unit ... 252
M.3 Foam concentrate pumps ... 253
M.4 Foam concentrate ... 254
M.5 Foam concentrate tanks ... 254
M.6 Foam concentrate pipes and water-foam concentrate mixture pipes ... 255
M.7 Pressure loss calculation with foam concentrate pipes ... 256
M.8 Waste disposal ... 257
Annex N Methodology for the classification of stored goods utilising calorimeter tests (informative) ... 258
N.1 Introduction ... 258
N.2 Test principles ... 258
N.3 Method ... 258
N.4 Evaluation of the method ... 258
N.5 Bibliography ... 258
Annex P Confirmation on the connection of hydrant systems ... 259
Annex Q Confirmation: Concrete-casting of sprinkler pipes ... 260
Annex R Requirements for material and fire resistance classes and their classification in accordance with DIN 4102 and DIN EN 13501 ... 261
R.1 Principles ... 261
R.2 Combustibility of building materials ... 261
R.3 Fire resistance of components ... 263
Annex S – deleted – ... 267
Annex SL Extinguishing support systems ... 268
SL.1 Scope ... 268
SL.2 Installer ... 268
SL.3 Separation ... 268
SL.4 Rating basis ... 268
SL.5 Water supply ... 269
Annex T Design in acc. with other regulations ... 271
Annex U Fire compartmentation and separation of outdoor storage of combustible materials and protected buildings (informative) ... 272
U.1 Fire compartmentation ... 272
U.2 Separation between outdoor storage of combustible materials and protected buildings ... 272
